

Reading Assignment (AI-assisted)

1. Assignment Overview

As part of the ongoing learning, students are required to read articles from a provided list every two weeks. Each student will work with Generative AI tools and provide evidence of the collaboration (i.e., dialogue records between students and AI).

2. Assignment Requirements

- Article List: A list of articles will be provided. Each student will pick one article to read at the beginning of every two weeks.
- Preparing reading notes: Each student will prepare a summary and reading notes (with their discussion or extension on the article) before the due date.
- Each student will ask AI 5 in-depth questions based on the articles and learn/collect answers from AI.
- Submit dialogue records between human and AI, including article summaries and Q&As.

3. Grading:

- For each article you read and complete the associated tasks, you will earn a maximum of 5% credit on your final grade.
- The credit will be discounted if no evidence can be found to prove students' active learning effort in understanding the article.
- **Scores will be awarded based on the quality of the students' questions. Students are encouraged to raise counter-arguments based on AI's feedback, and students are encouraged to criticize/correct AI's output.**

4. Submission (every two weeks)

- Dialogue records between students and AI
- The records should clearly reflect which article is being learned, and the article summary, as well as Q&As jointly prepared by students and AI.
